

30<sup>th</sup> March

● First submitted Hertfordshire record in 2021

■ Not yet seen in Hertfordshire in 2021

■ Seen in Hertfordshire in 2021

| Today's date

This plot shows when 19 of our common spring migrant birds are most likely to first be seen in Hertfordshire. The vertical line within each box is the average first date for that species. The boxes and whiskers show when we'd expect to first see the species in most years. The small triangles show unusually early or late first records for that species.
